

Reliable and Protected

Windows Small Business Server 2003 gives your business a more reliable foundation—and a protected network

For every business, security and reliability demands leave little margin for error. Safeguarding your critical business information and maintaining a dependable working environment are non-negotiable.

Microsoft Windows Small Business Server 2003 delivers on all of these fundamentals. It's built on Windows Server 2003 technology, the most reliable network operating system Microsoft has ever produced. With built-in firewall protection and secure remote access capabilities, you get the confidence that comes from knowing your infrastructure is protected.

For more information, we invite you to visit www.microsoft.com/sbs or contact a Microsoft technology provider in your area.

"Last month I got 2,200 unwanted, junk e-mails. Now, with Outlook 2003, only a half dozen slipped through. The junk mail filter literally gave me back two hours a day. And the benefit to the entire office translates into a time savings of over \$20,000 per month."

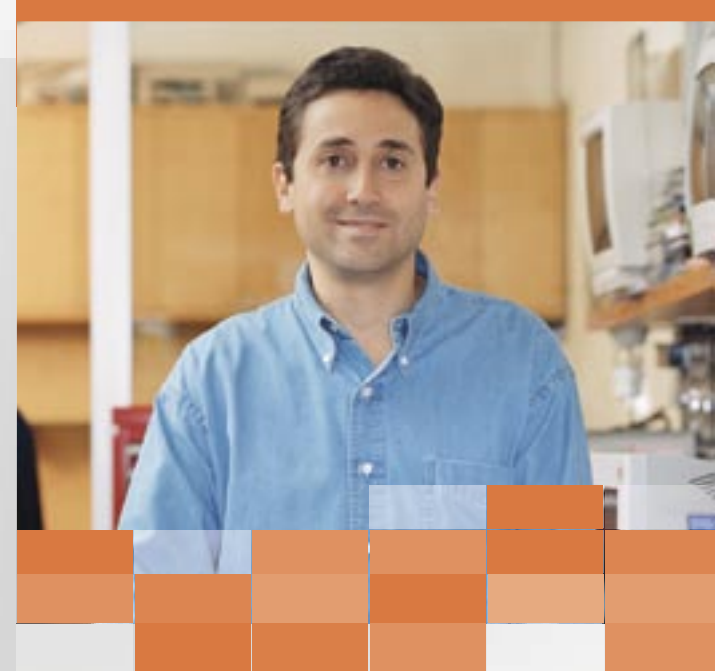

**Ryan Donovan, Executive Vice President
Times Square Trading**

"Before Windows Small Business Server 2003, we would have never considered putting a computer station on the factory floor. There were just too many security and dependability issues. But this experience has shown us that it is now not only possible, but also simple."

**Maurice Zagha, CEO
W&E Baum**

"Having no downtime greatly enhances our employees' ability to get their jobs done."

**Darcy Oakden
Chief Financial Officer
Atom Jet Industries**

"I need a network that's dependable and protected."

Microsoft® Windows® Small Business Server 2003 can help your business maintain a more reliable and protected operating environment, to keep it up and running.

Enhanced security and reliability provide real value for your business

A secure technology environment that provides reliable uptime for your business is invaluable; without it, your employees can't work as productively, and your business can't serve your customers as consistently and effectively.

Windows Small Business Server 2003 technology reduces hacker attacks against company networks by 60 percent. And its simplified security settings help to make sure that the steps necessary to protect your business are in place. Junk mail controls lock out known spammers and remove dangerous e-mail attachments. A built-in firewall protects your network from unauthorized users.

What can these capabilities do for your business?

The Center for Health Training

A 20-employee health and human services consulting and training firm.

Since implementing Windows Small Business Server 2003, they've achieved*:

- >> An extra 2.5 days of work per employee per year as a result of not having to recreate lost documents.
- >> A cost savings of \$1,000 per year through enhanced system reliability and the reduced need for service calls.
- >> A savings of 10 minutes a week per employee through eliminating the need to reboot their server.
- >> A 50 percent reduction in IT management time and costs and internal support efforts.

Protect your critical business information

Windows Small Business Server 2003 offers a comprehensive and integrated back up solution. It enables your business to easily back up your business information—automatically—and restore lost data.

Create your company's back up strategy.

What to back up? How often and when? Where to store information? Once in place, these selections continue to protect your data for you day after day.

Automatically redirect files from employees' PCs to your company server. Your employee and company information can be backed up on a regular basis. Your employees can focus on their work—not worrying over whether they'll lose it.

Employees can quickly and easily retrieve data on their own. That goes for accidentally deleted files and e-mails; previous versions of documents can also be restored without a hitch.

Protect your network

Windows Small Business Server 2003 automatically protects your business from outside—and unwelcome—intruders. A built-in firewall guards your network against unauthorized users. Additional tools are available to manage and monitor Internet access within your business.

You and your employees can remotely access information and resources. Windows Small Business Server 2003 provides a wide range of security features including: authentication and authorization; secure user authentication; data encryption; and much more.

Spammers are blocked, providing more effective junk mail controls. Filters can be configured automatically.

Dangerous e-mail attachments are automatically removed to help prevent virus attacks.

Keep your business up and running

The ability to achieve a dependable, easily managed working environment is a key reason why Windows Small Business Server 2003 is the top software server choice for business owners. It can help your business operations stay up and running.

Management, support, and monitoring of the system are all simplified. Daily reports are available to help manage the system proactively. And because management and monitoring tools can be accessed remotely, outside technology consultants can connect with your system and perform the work more efficiently and cost-effectively from their office.

Peace of mind: the great intangible

Consider how much you and your employees will value a dependable working environment, with less spam to deal with, and the ability to retrieve deleted information. Many business owners say a major benefit of Windows Small Business Server 2003 is their ability to do business more securely—whether in the office or away—while knowing their important data is protected.

"Less problems with our network means more time to add new capabilities to our Web-based proprietary software. That, in turn, could easily translate into a 10 to 20 percent increase in the volume of transactions we're able to handle; a huge surge in productivity."

Ryan Donovan
Executive Vice President
Times Square Trading
